

Table 20-1. T7 genes

<u>Class I</u>	<u>Function<sup>a</sup></u>	<u>Selected references</u>
0.3	B-DNA mimic; anti-type I restriction	<a href="#">301</a>
0.4, 0.5, 0.6A, 0.6B	not conserved; non-essential	
0.7	protein kinase; host-transcription shut-off; Col Ib exclusion	<a href="#">84, 211</a>
1	T7 RNA polymerase	<a href="#">159, 287, 321, 329</a>
1.1	conserved, non-essential	
1.2	<i>E. coli</i> dGTPase inhibitor; F-exclusion	<a href="#">188, 190, 233, 235, 237</a>
1.3	DNA ligase	<a href="#">271, 262</a>
<u>Class II</u>		
1.4, 1.5, 1.6	not conserved, non-essential	
1.7	full-length gene not conserved; beneficial for growth	
1.8	poorly conserved, non-essential	
2	<i>E. coli</i> RNAP inhibitor	<a href="#">200</a>
2.5	SSB	<a href="#">128, 133</a>
2.8	not conserved, non-essential; homing endonuclease?	
3	endonuclease I, Holliday junction resolvase	<a href="#">51, 122</a>
3.5	amidase (lysozyme); regulates T7 RNAP activity	<a href="#">329</a>
3.8	not conserved, non-essential; homing endonuclease	
4A	primase-helicase; gp4B helicase from internal in-frame start	<a href="#">69</a>

4.1, 4.2	overlapons; not conserved	
4.3, 4.5	conserved, non-essential	<a href="#">275</a>
4.7	not conserved, non-essential	<a href="#">275</a>
5	DNA polymerase	<a href="#">58, 148, 149</a>
5.3	not-conserved, non-essential, homing endonuclease	
5.5	conserved, non-essential, binds <i>E. coli</i> HNS; $\lambda$ rex exclusion	<a href="#">153, 154</a>
	non-conserved -1 frameshift leads to T7 5.5-5.7 fusion	
5.7	conserved non-essential	
5.9	inhibits RecBCD nuclease, non-essential, not conserved	<a href="#">153</a>
6	5'->3' double-stranded exonuclease, RNase H	<a href="#">147, 251</a>
6.3	poorly conserved, non-essential	

### Class III

6.5	conserved, non-essential	
6.7	virion protein; ejected into infected cell	<a href="#">119</a>
7	non-essential, not conserved; host range	<a href="#">62, 273</a>
7.3	essential virion protein; ejected into infected cell	<a href="#">119</a>
7.7	not conserved, homing endonuclease	
8	head-tail connector protein	<a href="#">25, 298</a>
9	scaffolding protein	<a href="#">24</a>
10A	major capsid protein; -1 frame-shift yields	
	minor capsid protein gp10B F exclusion	<a href="#">24, 45, 188, 190</a>
11	tail protein	<a href="#">262</a>

12	tail protein	<a href="#">262</a>
13	essential; required for gp6.7 incorporation in virion	<a href="#">119</a>
14	internal core protein; ejected into infected cell	<a href="#">189</a>
15	internal core protein; ejected into infected cell	<a href="#">189</a>
16	internal core protein; ejected into infected cell	<a href="#">183, 184, 189, 268</a>
17	tail fiber protein	<a href="#">115, 263</a>
17.5	class II holin	<a href="#">302</a>
18	small terminase subunit	<a href="#">89, 309</a>
18.5-18.7	conserved; $\lambda$ <i>Rz-Rz1</i> homologs	<a href="#">21</a>
19	large terminase subunit	<a href="#">193, 195, 310</a>
19.2, 19.3	overlappons, conserved	
19.5	non-essential, conserved	<a href="#">126, 127</a>

---

<sup>a</sup> Conserved or not conserved refers to close relatives of T7
