

Table 45-3. Typical concentrations of enteroviruses, bacteriophages and fecal bacteria in domestic, hospital and slaughterhouse wastewater

Microorganism	Concentration of PFU or CFU / mL
Enteroviruses	1×10^{-1}
Somatic coliphages	1×10^4
F-specific RNA phages	3×10^3
<i>B. fragilis</i> phages	1×10^2 < 10^{-2} in slaughterhouse wastewater
Fecal coliforms	1×10^5
Fecal streptococci	1×10^4

PFU = plaque forming units

CFU = colony forming units
